About me

Experienced web developer with a proven history of work in the information technology and services industry. All the necessary experience and skills to create websites and web applications. A strong engineering expert with a bachelor's degree focused on web technologies and best design practices. I am always looking forward to a challenging task and expanding my knowledge base. I love working in a healthy team environment, but I also know how to be self-sufficient if the project requires it.

Skills

- Visual Studio Code
- Composer

Work Experience

WebDevelopment - Wordpress Developer

08/2016 -11/2017

- Worked on multiple WordPress projects, including installing themes, inserting content, and configuring plugins.
- Customized themes based on designer-provided layouts to achieve pixel-perfect results.

Mediavuk D.O.O. - Full stack Developer

03/2018 – 07/2020

- Developed a customizable and responsive WordPress theme for schools in Germany as a solo project, collaborating with designers for pixel-perfect implementation.
- Delivered tailored WordPress websites and WooCommerce shops, including a shop for adult diapers.
- Built web applications using PHP, SQL, JavaScript, and Vue.js, including simple CRUD systems.
- Set up and configured WD servers and optimized systems for company operations, including virus removal and system maintenance.

Utopia Tech - Web Developer (Full stack)

07/2020 – 03/2022

- Developed custom add-ons and software solutions to extend website functionality beyond plugin limitations.
- Optimized websites for performance and resolved various bugs.
- Designed and implemented notable projects, including:
- A custom plugin for Elementor, adding widgets with sliders to enhance design capabilities.
- A plugin that displays user activity from form submissions in real-time, showing interactive bubbles with relevant information.
- A login form for WordPress, built with PHP and AJAX, allowing user registration and authentication.

Consulteer - *Frontend Developer*

03/2022 - 01/2025

- Developed Angular-based web applications, collaborating with clients and backend teams to deliver scalable solutions.
- Key projects:
    - Healthcare App: Enabled video calls, document sharing, and user management.
    - Vacation App: Streamlined team leave coordination.
    - Taxi App: Built real-time booking and route management.
    - Optimized application performance and ensured seamless integration.

Freelance (Full stack)

- Designed, developed, and maintained WordPress websites for diverse clients, ensuring functionality, security, and timely updates.
- Customized sites using child themes to add new features without impacting core themes, ensuring seamless updates.
- Created and implemented custom plugins to meet unique client requirements, delivering tailored solutions aligned with business objectives.
- Performed regular maintenance, including troubleshooting, updating themes/plugins, and optimizing performance for an enhanced user experience.
- I develop dynamic, user-friendly web applications using React and Angular. With a strong focus on performance, scalability, and clean code, I build modern UIs that enhance user experience. Whether creating single-page applications (SPAs), integrating APIs, or optimizing frontend performance, and delivering efficient and responsive solutions tailored to project needs.

Education

College of Electrical Engineering and Computing Vocational Studies

New computer technologies
October 2014. - April 2017.

High school
GSP Technical School
September 2010. - June 2014.
