About me

Senior Full-Stack Developer with strong experience building custom web platforms and CRM systems using WordPress, PHP, Angular, and React. Specialized in custom plugins and themes, REST API integrations, authentication systems, and interactive map-based features.

Experienced in working with external APIs and Google Cloud services, optimizing performance for large datasets, and delivering scalable, maintainable solutions. Comfortable owning projects end-to-end and collaborating in cross-functional teams.

Skills

Frontend:

- Angular, React, TypeScript, JavaScript, RxJS, CSS (SASS, Tailwind), UI Architecture

Backend:

- PHP, REST APIs, WordPress (OOP plugins & themes), WooCommerce, MySQL

Platforms & Integrations:

- Google Maps & Google Cloud APIs, CRM & Booking APIs

Tools & Practices:

- Git, Docker, CI/CD, Performance Optimization, Clean Architecture, Composer, Grunt.js, GitHub, PostgreSQL

Work Experience

WebDevelopment - Wordpress Developer

08/2016 -11/2017

- Worked on multiple WordPress projects, including installing themes, inserting content, and configuring plugins.
- Customized themes based on designer-provided layouts to achieve pixel-perfect results.

Mediavuk D.O.O. - Full stack Developer

03/2018 – 07/2020

- Developed a customizable and responsive WordPress theme for schools in Germany as a solo project, collaborating with designers for pixel-perfect implementation.
- Delivered tailored WordPress websites and WooCommerce shops, including a shop for adult diapers.
- Built web applications using PHP, SQL, JavaScript, and Vue.js, including simple CRUD systems.
- Set up and configured WD servers and optimized systems for company operations, including virus removal and system maintenance.

Utopia Tech - Full stack Developer

07/2020 – 03/2022

- Developed custom add-ons and software solutions to extend website functionality beyond plugin limitations.
- Optimized websites for performance and resolved various bugs.
- Designed and implemented notable projects, including:
 - A custom plugin for Elementor, adding widgets with sliders to enhance design capabilities.
 - A plugin that displays user activity from form submissions in real-time, showing interactive bubbles with relevant information.
- A login form for WordPress, built with PHP and AJAX, allowing user registration and authentication.

Consulteer - Frontend Developer

03/2022 - 01/2025

- Developed and maintained **Angular-based** web applications.
- Integrated **REST APIs** and leveraged **RxJS** for reactive programming.
- Used **Docker** for containerized deployments.
- Developed **custom features** like a chat system using **Vanilla JavaScript, HTML, CSS, and Grunt preprocessors**.
- Managed version control and CI/CD workflows using **GitLab** for Angular projects.
- Created reusable components, optimized performance, and ensured smooth integration.
- Worked on key projects:
 - **Healthcare App** – Video calls, document sharing, and user management.
 - **Vacation App** – Streamlined team leave coordination.
 - **Taxi App** – Real-time booking and route management.
- Debugged and resolved complex issues to enhance user experience.

Oversee - Full Stack Developer

07/2025 - present

- Architected and delivered a custom Property Management Portal end-to-end
- Developed custom WordPress themes and OOP plugins (ACF-driven architecture, REST APIs)
- Built authentication systems (custom login, registration, role-based access control)
- Integrated external CRM and booking APIs with secure data synchronization
- Implemented interactive Google Maps features with external unit data and advanced filtering
- Managed Google Cloud services and APIs (Maps, Vision API, Calendar, Sheets/Excel scripts)
- Developed admin dashboards and complex workflows (leasing, maintenance, reservations)
- Optimized performance for large datasets (AJAX, pagination, server-side filtering)

Freelance (Full stack)

- Designed, developed, and maintained WordPress websites for diverse clients, ensuring functionality, security, and timely updates.
- Customized sites using child themes to add new features without impacting core themes, ensuring seamless updates.
- Created and implemented custom plugins to meet unique client requirements, delivering tailored solutions aligned with business objectives.
- Performed regular maintenance, including troubleshooting, updating themes/plugins, and optimizing performance for an enhanced user experience.
- I develop dynamic, user-friendly web applications using React and Angular. With a strong focus on performance, scalability, and clean code, I build modern UIs that enhance user experience. Whether creating single-page applications (SPAs), integrating APIs, optimizing frontend performance, and delivering responsive solutions tailored to project needs.

Education

College of Electrical Engineering and Computing Vocational Studies

New computer technologies

October 2014. - April 2017.

High school

GSP Technical School

September 2010. - June 2014.
